Voice Over Narrative

“

The steadfast growth of his organization made Paul extremely happy!

However, the massive amount of data generated and stored across various geographies, operational units, and systems was a rising concern for his organization.

Managing such large amounts of data without the right tools was a daunting task for him.

However, with the right solution, this data could become a gold mine of meaningful insights and help his organization unlock the real value of procurement!

Paul chose Zycus' Spend Analysis solution which provides granular visibility across the organization-wide spend. The robust analytics support helps in analyzing large volumes of spend & supplier related data, and identify actionable insights.

With enhanced visualization and intuitive reporting capabilities, they can access pre-canned or ad hoc reports for a detailed analysis.

The solution also provides linkages between current price variations and past spend patterns of commodities, thus helping the organization save money and reduce maverick spends.

Just like Paul's organization, you too can derive valuable insights which can help you meet your strategic procurement objectives and gain a competitive edge in the market with Zycus.

Video Screen Play

	Scene Description	Voice Over Narrative
	Screen with Zycus logo and the title “Getting Hold of Big Data”	
1	We show an office space with people busy and working and they are shown increasing (signifying growth). In split screen we show Paul sitting in his cabin and he’s seen happy.	The steadfast growth of his organization made Paul extremely happy!
2.	In the split screen the expressions of Paul change to that of worry with exclamation marks popping. We focus to the screen of people working and show database icons emerging from the desktops and travelling to the database room (in the same organization and outside too).	However, the massive amount of data generated and stored across various geographies, operational units, and systems was a rising concern for his organization.
3.	We see Paul looking at the camera in a worried expression, with question marks and exclamation marks popping out from his head, suggesting problems.	Managing such large amounts of data without the right tools was a daunting task for him.

4	We cut to see a conference table where we show Paul and the team members in discussion and show several thought bubbles to them, in which we show, insights, graphs and data icons.	However, with the right solution, this data could become a gold mine of meaningful insights and help his organization unlock the real value of procurement!
5	All the thought bubbles combine to form the Zycus logo. We show an outside view of the company, and a magnifying glass hovering over it, and from this we pan out a graphical representation of various graphs that depict organization's spending.	Paul chose Zycus' Spend Analysis solution which provides granular visibility across the organization-wide spend. The robust analytics support helps in analyzing large volumes of spend & supplier related data, and identify actionable insights.
6	We zoom in to show a character (perspective shot or a PPT in a conference room) sitting on the PC and show respective screenshots pan out on screen.	With enhanced visualization and intuitive reporting capabilities, they can access pre-canned or ad hoc reports for a detailed analysis.
7	We continue to show the screenshots and highlight the respective features of the solutions (how past spend patterns help in deriving current price); along with it we show a "Save Money and Reduce Spend" icon on top of the PC.	The solution also provides linkages between current price variations and past spend patterns of commodities, thus helping the organization save money and reduce maverick spends.

8	We cut back to show Paul and his team members happy and relaxed and shaking hands with each other, now that their problem solved. We zoom out to see their company much more posh looking and progressed than the others.	Just like Paul’s organization, you too can derive valuable insights which can help you meet your strategic procurement objectives and gain a competitive edge in the market with Zycus.
9	We cut to show the logo, branding and the email address of Zycus.	To know more, contact us!

THE END
