

ADVIDS

Script for TestResults.io Video

Draft 1

Written by: Ashish Sethi

Medium: 2D Color Animation

Duration: 90 seconds (+/- 10 seconds for vo)

ADVIDS

	Scenes	Narrative
1.	We show Scott sitting on his table, in a room, it is gradually being lit up; we show the text on screen as “DIGITAL TRANSFORMATION”. Scott’s expressions are that of tension and worry;	As head of the organization’s operations, Scott realized that the digital transformation forced on him led to challenges he was not prepared for.
2.	and we show a team of software professionals (with a distressed body language) working, they are seen writing a code we show several popup being animated with releases popping up one after another, lots of connections to other software.	Higher release frequencies, dependencies on everchanging 3 rd party services and unexpected side effects of even the simplest change did not leave Scott any option. He knew, only automated testing would bring back quality.
3.	With the previous screen as background, in the centre of the screen we show the Text on screen as “Resources” with the relative icons like money, time, manpower etc. On the either sides we show text on screen as “Investing on and Learning a Test Tool.” “Hiring Experts” “Creating an Automation Framework for Your System.” “Providing Test Execution Environments.” “Maintaining Automation Framework for Changes in Your System.” As these texts on screen appear we show the resources in the centre depleting. (Money reducing, clock running fast, increase of workforce etc.)	But with all the tools, frameworks and test environments to maintain, the traditional approach for test automation was far too complex. It exhausted his resources, let alone his budget and still broke on every release.
4.	In this frame we show the logo of Testresults.io with a transition.	What Scott really wanted was automated testing without the hassles of test automation. He wanted reliable results. Welcome to Testresults.io.
5.	We show Scott, working on a P.C. (he’s opening the Testresults.io interface). We show the interface (website) loading.	Testresults.io eliminated Scott’s worries regarding test automation and simplified the entire process by providing automated testing as an integrated service.

ADVIDS

6.	We show the screen shots here with respect to the narrative mentioned. A mock up of the screen shots will be created, and the mouse animation hovering over the tabs and selecting the options will be seen in a seamless manner. On “A short while later” Scott receives an email with notification that tests are completed.	Now when Scott needs to get results for his regression tests, he logs into the portal, uploads the new regression test plan, uploads his new release of the software and selects the test environment; With a single click all his regression tests are executed simultaneously. A short while later he receives the results and can access the detailed reports and screenshots for every test case. Scott just started to use the power of digital transformation for his success.
7.	We zoom into the P.C screen (as if behind the scenes visuals are seen) and show codes running as an overlay effect on a team of Testresults.io software engineers working on their pc’s, testing the software*. We then see the code being sent to different PCs or server that are appearing. These systems take different forms (some like windows PC, some more like Apple computers, some more like embedded system) With a zoom out transition we see that this (the testresult.io engineers working) and entire operation was in the black box. * This should be quite detailed, showing an engineer taking a screenshot of a button on a software (drawing a frame around a button labeled “New User” or similar). He then writes code like Click (“NewUserButton”)	Obviously, there is no magic involved. But how are your tests automated? Our dedicated TestResultsIO engineers translate your test plans in automated test cases, based on our advanced image detection and text recognition engine. If the test cases need to be changed for a software update, this is of course part of the deal. We also host the test environments in our cloud or - if you prefer - we can test in your own infrastructure.
8.	In this frame we show the software professionals (earlier from Scott’s company) working on different things (relaxed body language).	Now that the software testing has been truly automated with Testresults.io, Scott and his testing team turned their focus on defining new and better test scenarios rather than getting stuck in

ADVIDS

		trying to automate their tests.
9.	We zoom out and see a top view of Scott’s company, as the transition continues we show many companies popping (multiplying) up with the Testresults.io logo on top of them.	Just like Scott and many others, you too can trust TestresultsIO for an integrated automated testing solution.
10.	We show the company logo here with the website and the tag line (Automated Testing. Done.)	To know more get in touch on www.testresults.io . Automated Testing. Done.
